

An information about Schneider agricultural devices

Devices for Compact Loader: Small but powerful!

Compact loader make it possible to work efficiently in tight work situations. For this purpose, Schneider offers the appropriate **buckets and gripper in adapted dimensions:**

The Loader Bucket Mini offers a **high volume** in relation to its small width. The wear resistant cutting edge of hardened steel (500 HB) and the wear plate under the blade bottom ensure a long service life.

The Fork With Grapple Mini enables the removal and feeding of grass and corn silage as well as the transport of manure, straw, green waste and shrub cuttings. **The opening width of 822 mm is an absolute plus.** The wear plate under the lower protected tines ensures a long service life.

The Multipurpose Bucket Mini is the all-rounder for shrub cuttings, manure or other loose and bulky loads. The screwable side plates prevent loss of the load.

The high opening width makes it possible to approach a wall with the grab open. The hardened scraper edge (500 HB) and the wear plate under the bucket bottom **contribute to the special robustness.**

The Sieve Bucket Mini with 20 mm round rods at a distance of 40 mm removes stones from the soil, loads root crops cleanly, aerates topsoil, picks up wet soil, unpacks paving roads and much more.

Due the **thick-walled supporting tube**, the **stable side plates** and **additional protective runners at the bucket base**, it is almost **indestructible.**
