Rapid information for our customer.

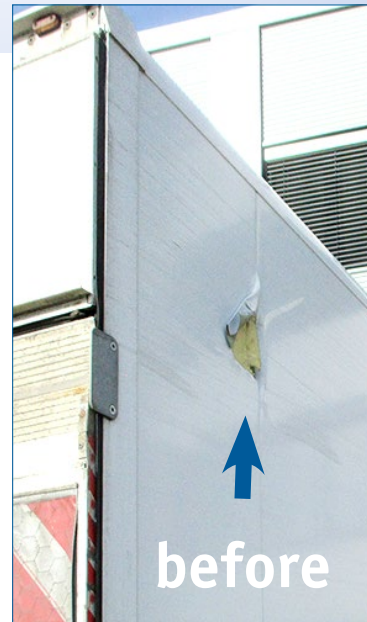

## FerroFoam® and AluFoam®: Repair is so easy

... if you know how to do it. **Damage** in foamed panels as e.g. the puncture in the event of accident damage **can be repaired in approx. four hours.** Afterwards, nothing points to the accident.

Since 2014, we have been offering **training courses together with ZKF for the repair of the foamed panels AluFoam® and FerroFoam®** as well as GRP cover layers. As a result of the pandemic, the course was not held in 2020.

This time **the date is scheduled for 17 - 19 May.** With the cooperation partner Spieß-Hecker the training is completed with the repair painting.

### Profiles for the kit-repair:

You receive an accidental vehicle with a defective wall profile. This is no problem for our spare parts service in the Bielefeld central warehouse.

Here we store all common profiles powder coated in the colours MB9147/RAL 9010. In many cases, therefore, **over-painting is not necessary.**

For a quick response, **the profiles are available in the most required fixed lengths.** You will receive them **as soon as possible**, if desired also overnight. **You simply adjust the length exactly** before installation.
